# KReader架构

John

## Yet Another Reader

- adobe 4宗罪:慢,bug多,贵,复杂
- reader太多, oreader, neo reader, fbreader, gallery ...
- 功能分散,维护痛苦,学习曲线长

### Yet Another Reader

- ■前提条件
- google open source foxit SDK
- oreader book engine
- neo reader 1.0, content browser, request manager

- Async: Request Manager
- 总是使用异步处理问题,因为处理问题需要时间,并 且不确定需要多长<u>时间</u>

- Host <-> Plugin
- Plugin功能
  - 只是提供数据
  - 不涉及任何UI,线程

- ReaderPlugin
  - ReaderDocument
    - ReaderView
      - ReaderRenderer
      - ReaderNavigator
      - ReaderTextStyleManager

- 开发步骤
- UI App,先忘记UI,先数据后UI
- UI —> Reader —> Plugin —> Reader —> UI(Callback)

### **UI** Action

- Action vs. Request
- Request 只处理数据
- Action 处理UI,数据请求依赖Request完成
- Request UI Wrapper

## Ul Handler

- 不同模式下的处理器
- HandlerManager
  - ReadingHandler
  - WordSelectionHandler
  - ScribbleHandler
  - TtsHandler
